SURVEILLANCE  
PROGRAM

MELANOMA & SKIN CANCER EARLY DETECTION

# What are the chances you have melanoma?

**1 in 5 people will get skin cancer in their lifetime.**

Skin cancer such as melanoma can appear at any time in your life and the risk increases as you age. The good news is that if it's detected early, it's almost always treatable. So don't leave it to chance.

At MoleSafe, our advanced Skin Surveillance Program is designed to look deep inside a mole's structure to detect any potential skin cancers that can't be seen with the naked eye.

**MoleSafe™**

# Get your skin checked and live with confidence.

Melanoma can be fast-growing and is the most life-threatening of all skin cancers but if caught early there is a nearly 100% survival rate. If you have ever been badly sunburned; used a sunbed; have a family history of skin cancer; have many moles or you have an outdoor lifestyle; your chances of getting melanoma increase dramatically.

Your skin is always changing. That's why our proven system combines advanced technology with skin cancer expertise to track those changes over time. It's the most effective way to detect melanoma early – when it's most treatable.

# SKIN SURVEILLANCE PROGRAM

## The MoleSafe™ SKIN Surveillance Program

Your MoleSafe Screening Appointment only takes one hour (approx). (Steps 1 - 3)

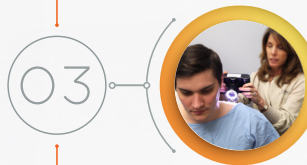

### Meeting with a Melanographer

First you meet with our certified melanographer to discuss medical history and address skin concerns

### Skin Evaluation & Imaging

A head-to-toe skin evaluation is performed. Clinical and dermoscopic images are taken of any moles/lesions of concern.

### Expert Dermatologist Report

A full diagnostic report is created by our expert dermatologist / dermoscopist with results and recommendations sent to you and your doctor.

**You're a part of the MoleSafe family!**  
We regularly check in with you and provide the tools and education to keep your skin safe.

### Total Body Photography

A series of high definition pictures are taken of 97% of the body's surface to create a clinical profile of your benchmark images.

### Digital Melanogram

Exam images are compiled into a digital record, along with other information, including lesion coding and history to fully document.

### Secure Online Archive

Your files are securely kept on record that you and your doctor can access via our online portal to keep monitoring your skin.

# MoleSafe™

The MoleSafe Skin Surveillance Program is a comprehensive skin documentation system designed to expose layers of skin lesions not typically viewed during a regular exam by a doctor or dermatologist. The MoleSafe system produces high-resolution diagnostic images and creates a profile for your skin that is monitored for any changes in your lesions over time. Following the exam, an extensive diagnostic report of your results is sent to you and your doctor with recommendations and instructions for follow-up visits and/or treatment.

**The Number One Choice for Over 300,000 Patients Worldwide**

"If I did not get a MoleSafe check-up, I probably would not be here today!"

**Alan**  
Skin Cancer Survivor

"MoleSafe found something that my doctor did not and we were both glad they did."

**Andrea**  
Skin Cancer Survivor

"The cost was worth every cent. You can't put a price on protecting yourself."

**Bruce**  
Skin Cancer Survivor

"My tanning bed use led me to get properly checked out. MoleSafe can save your life."

**Dana**  
Skin Cancer Survivor
